

# SPLUNK INSTALLATION AND CONFIGURATION MANUAL

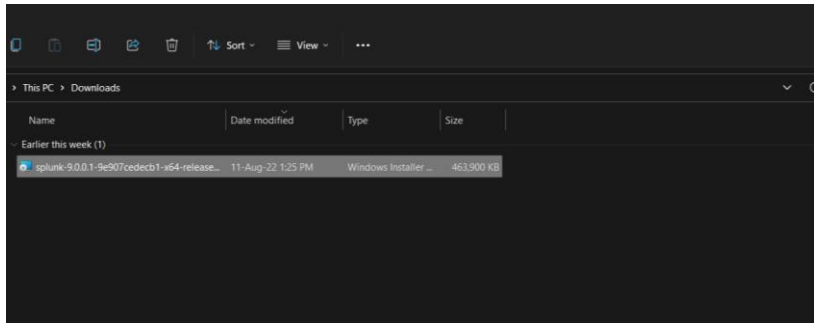

Shehryar Kamran

## Installation and Configuration

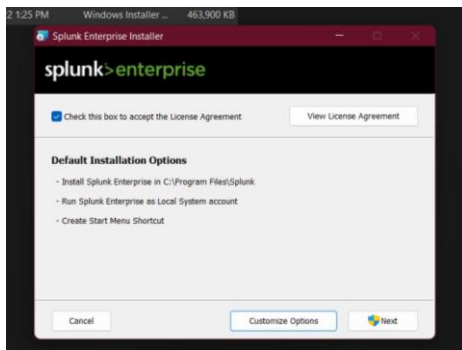

### Step 1:

Double click on downloaded Splunk Enterprise software

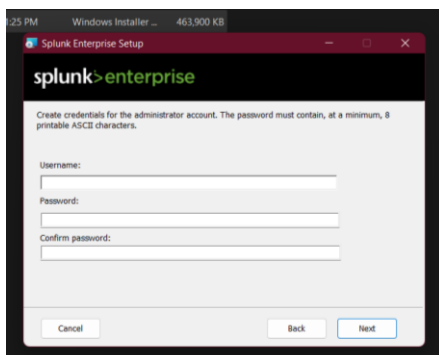

### Step 2:

Check the box to accept license Agreement and click install

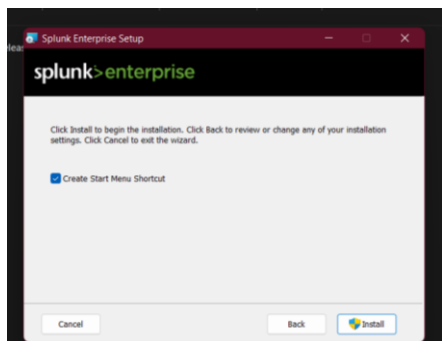

### Step 3:

Create your administrator account, select a username and password (minimum 8 character long)

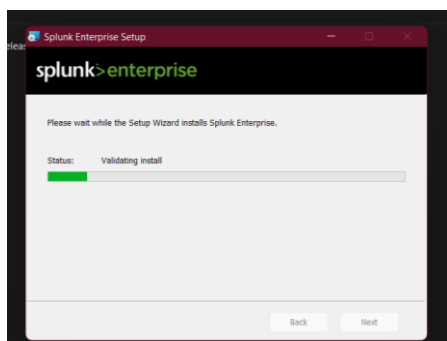

### Step 4:

Click on create start menu option if you want your software in start menu and click on install button to proceed

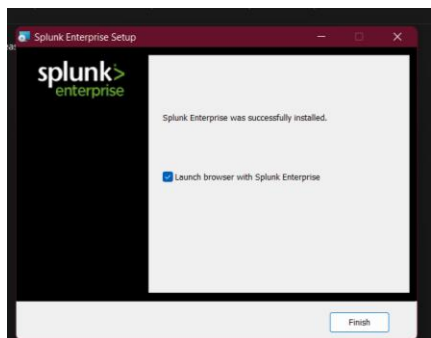

Please wait while setup wizard installs Splunk Enterprise.

Step 5:

Click finish to complete installation and launch it

Step 6:

Clicking launch button browser will launch below page, enter username and password which you entered on **Step 3**, if username is not remember than use admin in username with your password and contact Splunk administrator if both username and password not remember.

After login we get below screen for work.
